3d Brain Atlas Reconstructor on-line service

getPreview

Returns a model of a given structure from selected dataset as a zip file containing the reconstruction of very low resolution in X3D format and short description.

syntax
```
getPreview?cafDatasetName=<dataset name>
                  ;structureName=<structure name>
```

Required arguments

- cafDatasetName

  The name of the selected CAF dataset. The list of available CAF datasets is located at the end of this page.

- structureName

  Name of structure from hierarchy tree. In practice nearly all names should be fine. Formally name has to point to a root node of a subtree containing at least one node with representation among paths in CAF slides.

Examples

- http://service.3dbar.org/getPreview?cafDatasetName=whs_0.51;structureName=thalamus
