

3d Brain Atlas Reconstructor Installation (Ubuntu)

Note: This procedure is valid for *Ubuntu 9.04* and *Ubuntu 10.04 LTS* and was tested on 4.08.2011. For guides related to *Ubuntu 8.04* see [barSoftwareInstallation8.04?](#). Installation on other Ubuntu versions or other Linux distributions is similar, however not described yet.

1. [Installing required packages](#)
2. [Getting code](#)

Installing required packages

Installation consists of following steps (just paste code blocks into terminal it should be fine (Ubuntu 9.10)).

1. Installing Visualization Toolkit and other graphic libraries:

```
sudo apt-get install \  
libvtk5.2 libvtk5-dev libvtk5.2-qt4 libvtk5-qt4-dev \  
tk8.5 tk8.5-dev \  
python-vtk libgltkl2.0-1 libgltkl2.0-dev libgltkglext1 librsvg2-2 python-nifti
```

2. Installing python-related packages:

```
sudo apt-get install \  
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.6
```

3. Other packages:

```
sudo apt-get install \  
potrace pstoedit python-setuptools subversion python-epydoc
```

If You are developer, you may also want to install optional packages with documentation:

```
sudo apt-get install vtkdata vtk-doc vtk-examples
```

If you use Ubuntu 10.04 install following packages:

```
sudo apt-get install \  
libvtk5.2 libvtk5-dev libvtk5.2-qt4 libvtk5-qt4-dev \  
tk8.5 tk8.5-dev \  
python-vtk libgltkl2.0-1 libgltkl2.0-dev libgltkglext1 librsvg2-2 python-nifti
```

```
sudo apt-get install \  
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.6
```

```
sudo apt-get install \  
potrace pstoedit python-setuptools subversion python-epydoc
```

If you use Ubuntu 10.10 install following packages:

```
sudo apt-get install \  
libvtk5.4 libvtk5-dev libvtk5.4-qt4 libvtk5-qt4-dev \  
tk8.5 tk8.5-dev
```

```
tk8.5 tk8.5-dev \  
python-vtk libgdkgl2.0-1 libgdkgl2.0-dev libgdkglext1 librsvg2-2 python-nifti  
  
sudo apt-get install \  
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.8  
  
sudo apt-get install \  
potrace pstoeedit python-setuptools subversion python-epydoc
```

Once all packages are installed, it's time to create directory structure:

Getting code

It is assumed that main directory dedicated for software is `/home/$USERNAME/3dbar`. if You want to install to another directory, please replace `3dbar` with desired path.

In order to get latest stable version of 3dBAR fill out [following form](#) then download 3dBAR using link provided via email.

Unzip the file to your home directory and go to the 3dBAR directory:

```
unzip -f 3dbar_latest.zip -d ~/3dbar ; cd 3dbar;
```

then create directory where datasets will be stored:

```
mkdir -p /home/$USERNAME/3dbar/atlasses
```

Created directories have following purposes:

- **bin**: Holds all executable files, atlas parsers and auxiliary scripts
- **lib**: Holds 3dBAR api
- **atlasses**: Directory, where source data, *CAF datasets* and reconstructed models are stored. Each dataset (denoted as `DATASET_NAME`) contains following subdirectories:
 - ◆ `atlasses/DATASET_NAME/src` : Here source data is located. It may be put manually by user or ie. downloaded from internet depending on particular parser.
 - ◆ `atlasses/DATASET_NAME/caf` : Is the directory where CAF dataset is generated by particular parsers.
 - ◆ `atlasses/DATASET_NAME/reconstructions` : Directory for reconstructed models.
